Roster Management and Billing Portal**

**Technology:**

Development Technology:

.NET Framework 2.0, SOA based architecture

Operating systems

Windows XP, Windows 2003 Server

Database

SQL Server 2005

**Description**

Rema Tip Top is a multinational company engaged in providing Repair and Maintenance supplies and services to large manufacturers of Tyres across the globe. The company is headquartered at Germany.

GenX has been engaged by RTTA to study, design and develop a web based portal to manage the Roster of RTTA employees along with details of billing to be done for them in a month. Using the login Employees enter the details about the roster of jobs performed at different client locations. The portal also has the Rate management module in which the billing rate for different customers based on the type of job performed is maintained.

The portal is also having the functionality of posting financial information regarding Employee Roster invoice back to the ERP. Currently the portal has been implemented in Australia with upcoming plans for implementing it in different geographies across the globe in near future.
